

Found42 AI Readiness Report

Ada, here is where you stand

Your role: Sales or business development

45% - Stage 2 of 3: Ready to build

23 of 51 points

Foundations: 0-40%. Ready to build: 41-80%. Ready to scale: 81-100%.

You use AI every day, but most of that work isn't reusable, connected or tested yet. This is the point where learning to build your own skills pays off fastest.

Your five areas

How you use AI today: 67% · Developing (6 of 9 points)

You use AI regularly. The next gain comes from handing it whole tasks, like account research or meeting prep, instead of single questions.

Reusable skills and workflows: 25% · Needs work (3 of 12 points)

Every session starts from scratch. Save your best instructions as a Claude skill so the next run takes seconds, not a re-explanation.

Context and data: 67% · Developing (6 of 9 points)

AI has some context. Gather your best decks, briefs and follow-ups as reference examples so its output matches your standard.

Testing and safeguards: 42% · Developing (5 of 12 points)

You check some output. Make testing a habit: run every new skill on an example where you already know the right answer.

Team and scale: 33% · Needs work (3 of 9 points)

AI is a solo effort today. Pick the first tasks to hand over, and name one person with time to build.

Your quickest wins

Do any of your AI tasks run automatically on a schedule?

You answered: No, or not sure. AI only works when someone remembers to ask.

Schedule one task, like a weekly market scan, to run while you sleep.

Do you test a new AI skill or workflow before you rely on it?

You answered: Sometimes. A skill that works once can break for everyone else.

Test each new skill on an example where you already know the right answer.

Do you know the common ways AI gets things wrong, like making up facts?

You answered: Somewhat. One bad output can turn a team off AI.

Read the free Failure Mode Playbook so you spot the usual mistakes.

Your recommended next step

AI Builder for Go-to-Market

If you use AI daily but still redo the same research, prep and follow-ups by hand, this hands-on Saturday intensive teaches you to build skills that do that work for you.

- Install, customise and schedule ready-made skills
- Build and test a company research plugin with your group
- Take home eight ready-made plugins for go-to-market work
- Submit your own plugin for review and earn the AI Builder badge

Enrollment for this specific Saturday intensive, eight-plugin package and badge is not available on this site. Explore the current training track or inquire about availability.

Workflows built for your role

If off-the-shelf AI tools don't fit how you work, we sit down with you and your team, co-design Claude skills for your role, and test them before you rely on them.

- Discovery with the people who actually do the work
- Claude skills and plugins designed around your role and tools
- Testing and failure-mode training before rollout

Inquire about workflows: <https://www.found42.com/contact>

Get the free starter kit

If you mostly ask AI quick questions, these three free resources turn it into something you rely on every day.

- Communication Intelligence: a ready-made Claude skill that sharpens your emails and messages
- The Failure Mode Playbook: spot the common ways AI goes wrong before they cost you
- Claude as a Strategic Advisor: a free mini course

The bundled starter kit and Communication Intelligence package are not published here. The current Skills Starter Library offers four downloads; Strategic Advisor offers a skill and published lesson. The Playbook has its own request route.

Scoring method

How this is scored: each of the 17 scored questions is worth up to 3 points, 51 in total. Your overall score is your points as a share of 51, rounded to the nearest whole percent. Area scores use the same method within each area. Your stage comes from the rounded overall score.

A starting point for a conversation, not an audit or certification. This PDF was generated locally; nothing was sent to Found42.

All your answers

1. Which AI assistant do you use most at work?

Claude

Context only - not scored

2. Does your company give you an approved AI tool for work?

Yes

3 / 3 points

3. How do you mostly use AI at work?

To draft and edit emails or documents

2 / 3 points

4. Does AI save you real time each week?

A little

1 / 3 points

5. For tasks you repeat, do you reuse saved AI instructions (like a saved prompt or Claude skill)?

Sometimes

1 / 3 points

6. Do you use AI for the regular parts of your job, like research, reports, meeting prep or follow-ups?

Now and then

1 / 3 points

7. Have you built or set up your own AI skill or workflow?

I tried, but I don't use it

1 / 3 points

8. Do any of your AI tasks run automatically on a schedule?

No, or not sure

0 / 3 points

9. Is your AI tool connected to apps you use, like email, calendar or shared drives?

Yes, one app

2 / 3 points

10. Are your work meetings recorded and transcribed?

Most of them

3 / 3 points

11. Do you have templates or good examples you reuse, like a standard deck or brief?

A few, but scattered

1 / 3 points

12. Do you check AI answers against the source before you use them?

Usually

2 / 3 points

13. Do you test a new AI skill or workflow before you rely on it?

Sometimes

1 / 3 points

14. Do you know the common ways AI gets things wrong, like making up facts?

Somewhat

1 / 3 points

15. Does your company have written rules on what customer or company data can go into AI?

Informal guidance only

1 / 3 points

16. Do you know which tasks you would hand to AI first?

I have some ideas

1 / 3 points

17. Does anyone on your team have time set aside to build AI workflows?

Someone does it on the side

1 / 3 points

18. When someone builds a useful AI skill, can the rest of your team use it?

Sometimes, shared in chat or email

1 / 3 points
